

# ENGINE VALVES

## CTP Bimetallic & Trimetallic Valves

CTP offers a complete range of Bimetallic and Trimetallic specialty engine valves. The bimetallic valves are manufactured using a friction-welding process that merges two pieces of material; Austenitic and Martensitic. Austenitic Steel is used for the valve head, and is known for its high heat and corrosion resistance properties, while the stem is made from Martensitic Steel which has high tensile strength and abrasive wear resistance properties. These bimetallic engine valves provide a higher resistance to wear and extreme temperatures and this ensures a long lasting service life. The CTP Tri-metallic valves are subjected to a secondary process; where a Stellite alloy is deposit welded onto the seat of the exhaust valves. Stellite is a group of cobalt-based alloys that is extremely resistant to corrosion, wear and intense temperatures.

With strict quality inspections all of the measurements of the valves are verified with a laser instrumentation, emphasizing on the micro-concentricity of the valve, to ensure maximum precision. This guarantees a perfect seal between the valve and valve seat every time.

### New engine valves added to our product offering:

Engine	Intake Valve	Exhaust Valve
3013	1566985	1566986
3024C, 3034	1888640	1529857
C2.2	3081860	3441624
C9	2527803	2418383
C12, 3176B/C, 3196	1570672	1570671
C15, C27, C32, 3508B	2365605	1537024

### CTP quality engine valves provide:

- ✓ Excellent resistance to extreme temperatures of the engine.
- ✓ Better resistance to mechanical stress and chemical corrosion.
- ✓ Improved endurance
