

New and improved Liner

In our constant effort to develop and enhance the quality of our products, CTP is pleased to introduce our new and improved CTP Wet Cylinder Liners 1105800 and 1979322.

New Features:

- ✓ *Designed for use in high mileage in-frame rebuilds, heavy duty and high horsepower engines.*
- ✓ *Deep pressure rolling instead of roller burnish of the cylinder liner flange. The deep pressure rolling of the liner flange radius improves the metal fatigue strength by a minimum of 50%. This means that a properly installed liner will last longer since the liner flange will not crack under normal operating conditions.*
- ✓ *New CTP cylinder liner reference and serial numbering system: CTP liners are marked on the liner flange spigot top face (fire dam) using the dot peen technology by an electromechanically metal dot-engraving stylus. The complete reference and serial number consists of the CTP prefix followed by the part number and a serial number.*
- ✓ *Improved performance, reliability and extended life.*

CTP liners are marked on the liner flange spigot top face using the dot peen technology.

Part No.	Engine Model
1105800	3306, 3304
1979322	3400 Series

* Other part no. not included in the list are available. Please contact your sales representative if you have any questions. Part Numbers are used for reference purposes only
